- As you'd expect the Galaxy S8 is fully dust and waterproof like its predecessor so has an IP68 rating. That extra button you see on the left side of the phone is to quickly launch Bixby, Samsung's artificial intelligence assistance - see the software section for more on Bixby the blog , well we have collected a lot of data from the field directly and from many other blogs so very complete his discussion here about , on this blog we also have to provide the latest automotive information from all the brands associated with the automobile. ok please continue reading:

Chinese smartphone maker Xiaomi's third big-screen phone, after the Mi Note and Mi Max, is the Mi 5s Plus. But don't let the name deceive you -- the Mi 5s Plus feels more like a successor to the Mi Note, which was due a refresh this year.

Sporting the same 5.7-inch display size as the Mi Note, the Mi 5s Plus comes with a few upgrades not found on the Note, including a fingerprint sensor on the rear, dual cameras and a much bigger 3,800mAh battery.

Similar to the Huawei P9, the Mi 5s Plus' dual 13-megapixel cameras feature a normal color sensor and a black-and-white one, which then combines both images for a more detailed image with less noise.

Huawei

HTC

and
even
Samsung)

Like the Mi 5s, the Plus sports the latest Qualcomm Snapdragon 821 processor. Depending on which version you get, it will either come with 6GB RAM and 128GB of onboard storage or 4GB RAM and 64GB storage.

While the phone's currently limited to China, expect it to be sold in markets such as India and Singapore in the near future. It will retail for 2,299 yuan (approximately \$345, £265 or

AU\$450) for the lower specced model and 2,599 yuan (about \$390, £300 or AU\$510) for the 6GB RAM version.

I'll be looking forward to see if the cameras on the Plus are as good as Huawei's P9, so do check back in the future for our review. In the meantime, here's a quick breakdown of the specs.
